

DataPlus® Mobile

Application Generator, Forms Builder, & Program Editor

DataPlus Mobile is a Windows-based application generator for both Windows Mobile and Windows 7/8/10 devices. Quickly create flexible data collection applications, which you can design and test on your desktop before deploying to your device.

The DataPlus Program Editor gives you the ability to add powerful features to your data collection workflows. Design one application, then run it easily on mobile devices and Windows tablets with different display sizes or versions of Windows.

Standard Features of DataPlus

- Configure forms without programming knowledge
- Design one application that automatically adjusts to different display sizes in order to deploy to different mobile devices
- Multiple data levels
- Features for automated data entry, error checking, and screen layouts
- Accommodates input from external serial and serial Bluetooth devices
- Touch screen control options
- Program Editor available to enhance functionality
- Integrated file transfer, and data conversion
- Database support of ODBC compliant databases
- Take previously collected DataPlus data back to the field for updates and edits
- TCP/IP data transfer – In versions 4.05 and newer

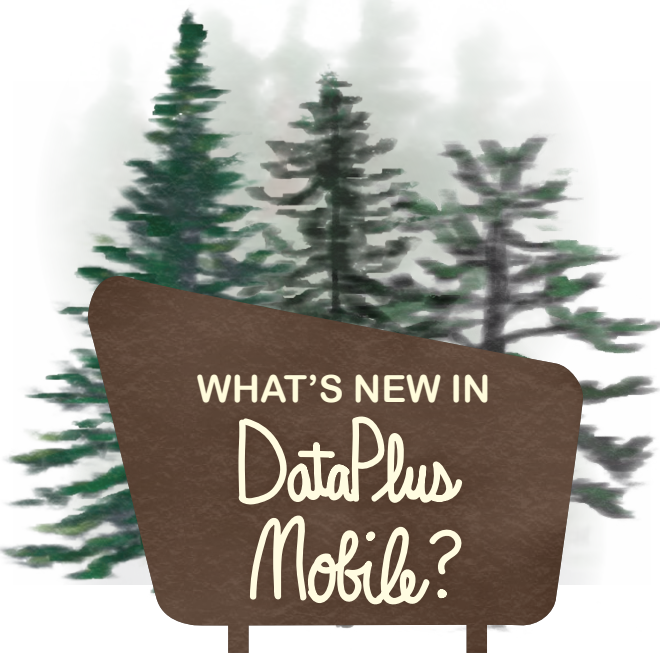

What's New in DataPlus Mobile?

- Improved Generator layout
- More data levels and branches
- GPS data collection of points, lines, or polygons and waypoint navigation
- Expanded data entry options, error checks, missing data checks, and user program events
- User friendly data prompts
- Branch control options
- Auto-store feature, based on data collected
- Locks and Blocks for data fields and hierarchy branches
- Check files can link to external lists
- One to many data relationships explicitly supported (key fields built in)
- Import existing DataPlus Professional applications and user programs
- Data Conversion to shapefiles
- Advanced Data Converter supporting ODBC, shapefile, ASCII, DBF, and MDB
- Application packaging for enhanced file security and transfer
- Bundled datasets for easier file management and data transfer
- ArcGIS Online compatibility with CSV format or Esri Maps for Office
- Desktop support for Windows 7/8/10
- Device support for Windows Mobile 5 & higher and Windows 7/8/10
- TCP/IP bidirectional file transfer between the host and remote device over wired and wireless networks – In versions 4.05 and newer
