Making DataPlus Professional version 3.xx compatible with

Windows Vista and Windows 7

- 1. Mobile Device Manager should be installed and working. Connect to a mobile device to be sure.
- Download DOSBox from dosbox.com. http://www.dosbox.com/download.php?main=1

🛱 DOSBox 0.74 Installer Setup: Installation Options						
Select components for DOSBox						
Select components to install: Core files Desktop Shortcut						
Space required: 4.3MB						
Cancel Nullsoft Install System v2,46	k <u>N</u> ext >					

3. Install it on the C: drive on the root directory (in a folder called DOSBox). It may default to a different location so you may have to change it.

🖞 DOSBox 0.74 Installer Setup: Installation Folder
This will install DOSBox v0.74 on your computer. Choose a directory
Destination Folder
C:\pOSBox Browse
Concernent in d. 4 2MD
Space required: 4.3MB
Space available: 413.3GB
Cancel Nullsoft Install System v2,46 < Back Install

4. Once DOSBox has finished installing, install DataPlus Professional

Install DataPlus Professional on the root of your C: "C:\DataPlus Professional"

DataPlus Professional Setup	×
Choose Destination Location Select folder where setup will install files.	No.
Setup will install DataPlus Professional in the fol	lowing folder.
To install to this folder, click Next. To install to a another folder.	different folder, click Browse and select
Destination Folder C:\DataPlus Professional	Browse
InstallShield —	< <u>B</u> ack <u>N</u> ext > Cancel

- 5. DOSBox will need to be run before the next step can be completed. Just go to Start\All Programs\DOSBox-0.74 and click to run DOSBox.
- 6. Once DosBox has opened you can close the program. This will have created the configuration file that you will need to edit.
- 7. Follow this file path; C:\Users\(your log in name)\AppData\Local\DOSbox\dosbox-0.74.conf and right-click on the dosbox-0.74.conf file and open the dosbox-0.74.conf file in notepad.
- 8. Push Ctrl End on the keyboard (or just scroll to the bottom), that will take you to the [autoexec] portion at the end of the dosbox-0.74 .conf file. Once there you need to create the path that will auto execute to the DOS you need to run.

At the bottom of the configuration file you will see the [autoexec] section. Click at the end of the sentence that reads : # You can put your MOUNT lines here.

```
Hit enter on your keyboard to start a new line and type:
mount c c:\datapl~1
Hit enter again to start a new line and type:
c:
The section of the dosbox-0.74.conf file you just edited should look exactly like this:
[autoexec]
# Lines in this section will be run at startup.
# You can put your MOUNT lines here.
mount c c:\datapl~1
C:
```

9. Once you add this to the dosbox-0.74.conf file click Save As; then change the name to dpp_dbx.conf and it will save that as a completely different file. You must also change the save file type drop down box to *All files* so windows will save it as a .conf file.

10. Next create a batch file. The batch file should start DOSBox and bring up the DOS window that is needed for the DataPlus Professional Application Generator test. Open notepad to create a batch file.

```
Type:

@echo off

Press enter to start a new line and type:

C:\DOSBox\DOSBox.exe -conf "c:\datapl~1\dpp_dbx.conf" "c:\datapl~1\dptest.exe"

Press enter to start a new line and type:

exit

Your batch file should look exactly like this:
```

```
@echo off
C:\DOSBox\DOSBox.exe -conf "c:\datapl~1\dpp_dbx.conf" "c:\datapl~1\dptest.exe"
Exit
```

Now go to Save As; name the file dptest.bat. Change the drop down box in the save window to *All files* so that windows will save the file as a .bat and save it in the DataPlus Professional file folder.

File <u>n</u> ame: dptes	t.bat			
Save as type: All Fil	es (*.*)			

- 11. The next thing that needs to be done is to go to Start\All Programs\Data Plus Professional\ and right-click on DataPlus DOS Data Editor and click Properties. Click the Shortcut tab and change the Target to:
- C:\DOSBox\DOSBox.exe -conf "c:\datapl~1\dpp_dbx.conf" "c:\datapl~1\dpp_edit.exe"

Click Apply, and then OK.

Data Plus Professional Application Generator and Data Plus Professional DOS Editor should now work in DOSBox for testing.

DataPlus Professional Help File compatibility with Windows Vista and Windows 7

Windows Vista and Windows 7 do not support .hlp files (help files). This is an issue for any program that uses .hlp files for its help section.

When you try to use help in DataPlus Professional in Windows Vista or Windows 7; a Windows help and support window will appear and explain that your version of Windows doesn't include the feature to support .hlp.

		🥹 Onli <u>n</u> e Help 🔻

When this window appears click on the Microsoft Help and Support link. This will take you directly to the page you need to download the program that will allow you to use the windows help format (.hlp).

You will need to know if you are using 64-bit or 32-bit Windows. You can scroll down and click the link for help to figure out which bit number you are using or if you already know you can click the link for the version of Windows you are using. You must also be logged in as an administrator on your computer.

Once you know the bit number and version of Windows you will go to the page that gives a description of the program you are about to download and install. Click continue.

When the program downloads, go to the C:\DataPlus Professional file folder and double click on the program installer you just downloaded.

Double clicking on the file will install the program. For best results you will want to install in to the C:\DataPlus Professional folder just like in the previous step.

Once it has installed, you will now be able to fully access all the of the help topics in DataPlus Professional.
